

The University of Koblenz is the youngest university in Germany – while also preserving a long-standing academic tradition. A multitude of transdisciplinary research projects spanning several institutions concentrated on a compact campus favourably affects our university routine. As the interdisciplinary university in the north of Rhineland-Palatinate with more than 9,400 students, we live the knowledge – transformation – innovation triad in our four profile areas “Education”, “Computer Science”, “Culture and its Mediation” as well as “Material and Environment”. We provide and conduct state-of-the-art teacher-training studies for all school types and maintain the transfer of our research results to civic society and regional businesses in a resilient and sustainable way. Join an aspiring university community and aid in advancing our further growth!

**We are seeking to fill the position of
Research associate with doctorate opportunity (m/f/d)
at the Institute for Integrated Natural Sciences, Department of Biology, Aquatic
Ecosystem Analysis Working Group**

A Ph.D. position in Plankton Ecology is available in the newly established working group “Aquatic Ecosystem Analysis” led by Prof. Dr. Kenneth Dumack. This professorship was established with financial support from the Federal Institute of Hydrology and the Federal Ministry of Transport (BMV). The part-time position (50%) is limited to three years, in accordance with the provisions of the German Act on Temporary Scientific Contracts (Wissenschaftszeitvertragsgesetz).

Teaching responsibilities are defined by the regulations of the Rhineland-Palatinate Higher Education Teaching Obligation Ordinance (HLehrVO).

This position provides access to cutting-edge molecular, biochemical, and ecological tools to explore interactions of algae (diatoms & cyanobacteria) with their protist parasites. We welcome applicants who are excited to link aquatic protistology, microbial ecology, evolution, and structural biochemistry to inform sustainable water management with broad environmental relevance. The candidate will work primarily in wet lab conditions, including methods such as culturing, (fluorescence) microscopy, infection experiments, and protein biochemistry, but further includes the drylab analyses of self-generated data with statistical tools commonly used in microbial ecology. The candidate will work on microbial communities stemming from marine (diatoms) and freshwater (cyanobacteria) habitats. This position is situated at the interface of fundamental research and applied water management, and is founded on a close collaboration between the University of Koblenz and the Federal Institute of Hydrology. More information about the working group is available at www.kennethdumack.de.

Further academic qualification (doctorate) is part of the job and is strongly supported.

Responsibilities:

- Participation in research, teaching, and academic self-administration
- Involvement in sampling and field excursions
- Presentation of research results at scientific conferences and in peer-reviewed journals

Qualifications:

- A successfully completed university degree (except for a bachelor's degree)
- Preference will be given to candidates with solid experience working with microbial eukaryotes (protists and/or algae), their viruses, or plankton in general
- Knowledge of microscopical & cell biological methods for functional characterization of microbial processes is desirable

What we offer:

- Integration into a research-active, well-networked environment with good infrastructure.
- A stimulating and varied range of responsibilities within a collegial team that values open communication
- Remuneration according to pay group 13 TV-L.
- Usual social benefits in the general public sector according to TV-L (annual special payment, pension scheme (VBL)).
- Compatibility of family and work, flexible working hours
- Varied sports program with health-promoting offers.
- Extensive opportunities for further education and training.

The University of Koblenz welcomes applications from all age groups, regardless of gender identity, disability, ethnic or cultural background, religion, ideology or sexual orientation. We aim to increase the proportion of women and are therefore particularly interested in applications from women. In the event of underrepresentation, women with equivalent aptitude and qualifications will be given preferential consideration. Severely handicapped persons will be given preferential consideration if their professional and personal qualifications are otherwise equal.

For further information, please contact Prof. Dr. Kenneth Dumack (Mail: kenneth.dumack@uni-koblenz.de)

Please, send your informative documents **by 14.08.2025**, quoting the **reference number 097/2025**, **exclusively by e-mail in one PDF file** to: bewerbung@uni-koblenz.de.

Please, refrain from sending in application photos. At the end of the procedure, the application documents will be destroyed in compliance with data protection regulations.
